CRACK THE HASHES

Aim:

To install and crack the hashed passwords using John-the-Ripper tool in Kali Linux.

Algorithm:

1. Install John-the-Ripper on your system using `sudo apt install john`
2. Prepare the hash file `hashes.txt` that is to be cracked.
3. Run John-the-Ripper specifying the path to the `wordlist.txt` and `hashes.txt`
4. Monitor the cracking process using `status` option in another terminal

Output:

A terminal window titled 'root@ip-10-10-88-66: ~' with a menu bar (File, Edit, View, Search, Terminal, Help). The terminal shows the command 'sudo apt-get install john' being executed. The output indicates that several packages were automatically installed and are no longer required, listing them: docutils-common, gir1.2-goa-1.0, gir1.2-snapd-1, libpkcs11-helper1, linux-headers-4.15.0-115, linux-headers-4.15.0-115-generic, linux-image-4.15.0-115-generic, linux-modules-4.15.0-115-generic, linux-modules-extra-4.15.0-115-generic, python-bs4, python-chardet, python-dicttoxml, python-dnspython, python-html5lib, python-jsonrpclib, python-lxml, python-mechanize, python-olefile, python-pypdf2, python-slowaes, python-webencodings, python-xlswriter, python3-boto, python3-botocore, python3-docutils, python3-jmespath, python3-pygments, python3-roman, python3-rsa, and python3-s3transfer. It then suggests using 'sudo apt autoremove' to remove them. Next, it shows the additional packages to be installed: 'john' and 'john-data'. It states that these are new packages. Finally, it shows the disk space requirements: 0 to upgrade, 2 to newly install, 0 to remove, and 356 not to upgrade. It also shows the need to get 4,466 kB of archives and that after the operation, 7,875 kB of additional disk space will be used.

```
